Thanks Mark. I admit, I'm not overly familiar with what all is needed for this type of analysis. I will work with the EFED team to help us scope this out, and circle back with you.

Thanks,
Amy

Amy,

I think that we, including Hope, should talk about exactly what the plan is and what precisely what data are needed. We provided the non-CA, but national citrus PCTn numbers. EFED would need new state-level numbers for citrus and all of the other registered crops to apply the same PCA-PCT approach. There is also the scenario refinement piece that involves rates, planting, and application information for chlorpyrifos. That work was done by BAB. If that piece of the refinement is wanted, Monisha should also be involved in the discussion.

Regards,
Mark

Subject: aldicarb citrus new use

Hi Mark,

I just wanted to follow-up with you and BEAD on the last team meeting for the citrus new use for aldicarb. In that meeting I indicated that for the drinking water assessment, EFED and RD IO have asked our team to explore using the new drinking water PCA/PCT methods for this action. While I am working with the EFED folks on how to conduct the work, my understanding is that we will need state level PCT information to do this. As such, I'm reaching out to you on what would exactly be needed (and in what format). I know BEAD provided some PCT analysis for this new use already, I just can't recall if it was for the project PCT for the citrus use only or if there is additional PCT information for other registered crops available.

I would be happy to set up a quick meeting with you all to discuss this further on what might be needed and timing.

Thanks,
Amy
